This questionnaire is addressed to pilots operating the B747-400. It is based on the Flight Crew Operations Manual (FCOM) 747-509,

and the Flight Crew Training Manual (FCTM) B747-400, both published by Air Atlanta Icelandic. It is not substituting any approved bibliography and it is not covering all topics. It is organized in 26 chapters, in order to be compatible with the bibliography of origin. It is configured under the ISD method, used in the Air Force of many states (i.e. USAF). As such, it serves for studying and better understanding, instead of assessing. In an ISD questionnaire: There are no statements about equally True or False. It is usually very easy to identify the True answer.

Remember that the question serves as an excuse to provide an information, not for assessing knowledge. ☐ The False answers serve to increase the contrast between True and False, and not to confuse the trainee and increase the level of difficulty. ☐ Whenever there is a choice of True or False, the answer is always the True. This is to prevent for a False information to be adopted. ☐ Whenever is asked to “Mark the True statements”, expect almost all statements to be valid. This serves as an excuse to provide information, not for assessing knowledge. Note that due to the bibliography of origin,

some company limitations or procedures may be incorporated in the questionnaire.

On 31 August 1983, Korean Air Lines Flight 007, a Boeing 747, departed John F. Kennedy International Airport, New York, United States, on a scheduled flight for Seoul, Republic of Korea. The flight had 269 persons on board. Soon after departure from Anchorage, Alaska, KE 007 deviated to the right (north) of its direct track, this deviation resulted in penetration of Sovjet

Russian air space. Military aircraft operated by the USSR attempted to intercept KE 007 over Kamchatka Peninsula. The interception attempts were unsuccessful. Upon approaching Sakhalin Island, USSR, the flight was intercepted by USSR military aircraft and shot down on the assumption that it was a United States RC-135 (spy) aircraft. There were no survivors.

On February 24, 1989, United Airlines flight 811, a Boeing 747-122, lost a cargo door as it was climbing between 22,000 and 23,000 feet after taking off from Honolulu, Hawaii, en route to Sydney, Australia with 355 persons aboard. As a result of the incident nine of the passengers were ejected from the airplane and lost at sea. The cargo door was recovered in two pieces from the ocean floor at a depth of 14,200 feet on September 26 and October 1, 1990. The probable cause of this accident was a faulty switch or wiring in the door control system. Contributing to the cause of the accident was a deficiency in the

design of the cargo door locking mechanisms. Also contributing to the accident was a lack of timely corrective actions by Boeing and the FAA following a 1987 cargo door opening incident on a Pan Am B-747.
