After two decades of rapid technological and structural change and an overall record of poor economic performance, Canadians need to take stock of the ongoing transformation of the labour market and its implications for public policy. The fundamental changes to the nature of work itself suggest that labour and social policies established decades ago may no longer be adequate or appropriate. Moreover, the continuing perception of increased instability and worsening employment outcomes, and the growing concern over increased earnings inequality and labour market polarisation, have raised serious questions about the role of government not only in addressing the consequences of economic adjustment but also in facilitating or, worse, hampering this process. In Adapting Public Policy to a Labour Market in Transition leading labour market specialists examine specific areas of public policy that have generated considerable attention and debate in recent years. They provide new evidence on issues of utmost concern to the well-being of Canadians and a solid assessment of the challenges and avenues for policy reform.

What determines the size and form of redistributive programs, the extent and type of public goods provision, the burden of taxation across alternative tax bases, the size of government deficits, and the stance of monetary policy during the course of business and electoral cycles? A large and rapidly growing literature in political economics attempts to answer these questions. But so far there is little consensus on the answers and disagreement on the appropriate mode of analysis. Combining the best of three separate traditions—the theory of macroeconomic policy, public choice, and rational choice in political science—Torsten Persson and Guido Tabellini suggest a unified approach to the field. As in modern macroeconomics, individual citizens behave rationally, their preferences over economic outcomes inducing preferences over policy. As in public choice, the delegation of policy decisions to elected representatives may give rise to agency problems between voters and politicians. And, as in rational choice, political institutions shape the procedures for setting policy and electing politicians. The authors outline a common method of analysis, establish several new results, and identify the main outstanding problems.
