One problem with helicoptering is that there are virtually no flying clubs, at least of the sort that exist for fixed wing, so pilots get very little chance to swap stories, unless they meet in a muddy

field somewhere, waiting for their passengers. As a result, the same mistakes are being made and the same lessons learnt separately instead of being shared - it's comforting sometimes to know that you're not the only one to inflate the floats by accident! Even when you do get into a school, there are still a couple of things they don't teach you, namely that aviation runs on paperwork, and how to get a job, including interview techniques, etc - flying the aircraft is actually less than a third of the job. Another is that nobody really tells you anything, either about the job you have to do (from the customer) or how to do it (the company) - you will always be up against the other guy who managed to do it last week! Sure, there will be training, but, even in the best companies, this will be relatively minimal. This book is an attempt to correct the above situations by gathering together as much information as possible for helicopter pilots, old and new, professional and otherwise, in an attempt to explain the why, so the how will become easier (you will be so much more useful if you know what the customer is trying to achieve). In short, this is all the stuff nobody taught me - every tip and trick I have learnt has been included.

Given its ubiquity, plugin-free deployment, and ease of development, the adoption of WebGL is on the rise. Skilled WebGL developers provide organizations with the ability to develop and implement efficient and robust solutions-creating a growing demand for skilled WebGL developers. WebGL Insights shares experience-backed lessons learned by the WebGL

Kafka on the Shore displays one of the world's great storytellers at the peak of his powers. Here we meet a teenage boy, Kafka Tamura, who is on the run, and Nakata, an aging simpleton who is drawn to Kafka for reasons that he cannot fathom. As their paths converge, acclaimed author Haruki Murakami enfolds readers in a world where cats talk, fish fall from the sky, and spirits slip out of their bodies to make love or commit murder, in what is a truly remarkable journey.

Written in an easy-to-understand style, this text provides a thorough coverage of the essential topics related to the teaching of social studies in secondary and elementary schools. Reflecting on the theoretical knowledge and practical skills required to teach social studies in an effective manner, the text first introduces its readers to the various components, study material, scope and importance of social studies. It then teaches the formulation of instructional objectives in social studies, and brings out the principles of social studies curriculum as well as its relationship with other subjects of the school curriculum. The book focuses mainly on improving the methodological concepts of the social studies teacher, and in doing so, discusses various methods of teaching; evaluation and planning of lessons, units and courses; organization of social studies room and the equipment to be kept in it; utilization of community resources; and implementation of various co-curricular activities. It also examines certain innovative methods of teaching such as team-teaching, micro-teaching and individualized instruction. KEY FEATURES ? Incorporates chapter outline at the beginning and chapter summary at the end of each chapter to help readers review the important topics. ? Provides chapter-end questions for students to drill the topics discussed. ? Discusses various topics with the help of a number of figures and tables that facilitates easy-understanding of the concepts. This book is suitable for a course on Teaching of Social Studies for the students of B.Ed. and M.A. (Education). It can also be used for the in-service teacher education programmes organized by the Central and State education boards.

The Radiation Exposure Compensation Act (RECA) was set up by Congress in 1990 to compensate people who have been diagnosed with specified cancers and chronic diseases that could have resulted from exposure to nuclear-weapons tests at various U.S. test sites. Eligible claimants include civilian onsite participants, downwinders who lived in areas currently designated by RECA, and uranium workers and ore transporters who meet specified residence or exposure criteria. The Health Resources and Services Administration (HRSA), which oversees the screening, education, and referral services program for RECA populations, asked the National Academies to review its program and assess whether new scientific information could be used to improve its program and determine if additional populations or geographic areas should be covered under RECA. The report recommends Congress should establish a new science-based process using a method called "probability of causation/assigned share" (PC/AS) to determine eligibility for compensation. Because fallout may have been higher for people outside RECA-designated areas, the new PC/AS process should apply to all residents of the continental US, Alaska, Hawaii, and overseas US territories who have been diagnosed with specific RECA-compensable diseases and who may have been exposed, even in utero, to radiation from U.S. nuclear-weapons testing fallout. However, because the risks of radiation-induced disease are generally low at the exposure levels of concern in RECA populations, in most cases it is unlikely that exposure to radioactive fallout was a substantial contributing cause of cancer.

This dictionary contains 10,000 Russian words in order of importance starting with the most common and finishing with words that occur about 8 times in a million. All the words have English translations, many have examples of usage and the entries include information on stress and grammatical irregularities. There is also a complete alphabetical index to the words in the list. A learner who knows all or most of these 10,000 words can be regarded as competent in Russian for all normal purposes. The list takes you from a beginner's core vocabulary through to postgraduate level.

Teaching and Digital Technologies: Big Issues and Critical Questions helps both pre-service and in-

service teachers to critically question and evaluate the reasons for using digital technology in the classroom. Unlike other resources that show how to use specific technologies - and quickly become outdated, this text empowers the reader to understand why they should (or should not) use digital technologies, when it is appropriate (or not), and the implications arising from these decisions. The text directly engages with policy, the Australian Curriculum, pedagogy, learning and wider issues of equity, access, generational stereotypes and professional learning. The contributors to the book are notable figures from across a broad range of Australian universities, giving the text a unique relevance to Australian education while retaining its universal appeal. Teaching and Digital Technologies is an essential contemporary resource for early childhood, primary and secondary pre-service and in-service teachers in both local and international education environments.
