been brought together to share their wisdom and present a look at this exciting world. This text is divided into a number of sections representing the rich diversity of concerns embraced by visual information designers. The first section is devoted to these foundational issues before moving on to particular domains of interest within public graphics: user instructions; warnings; forms; tables and graphs; maps and plans; way-finding information; and graphic symbols. This book is designed as a companion for anyone concerned with visual information design, particularly in the context of everyday use. Contributions are included from ergonomists, psychologists, commercial designers and health and safety professionals. The audience reflects these contributions and is pitched at a level which allows it to provide both practical guidelines and a rigorous academic understanding of the field.

This book constitutes the thoroughly referred post-proceedings of the 21st International Workshop on Combinatorial Algorithms, IWOCA 2010, held in London, UK, in July 2010. The 31 revised full papers presented together with extended abstracts of 8 poster presentations were carefully reviewed and selected from a total of 85 submissions. A broad variety of combinatorial graph algorithms for the computations of various graph features are presented; also algorithms for network computation, approximation, computational geometry, games, and search are presented and complexity aspects of such algorithms are discussed.
