Artificial Intelligence Definition. Artificial Intelligence (AI) is the science and engineering of making intelligent machines. The concept relates to using computers to emulate processes and behaviours of human intelligence, by engineering knowledge representation and agency response in a complex environment (Russell and Norvig, 2016).

~~Artificial Intelligence | An Introduction – GeeksforGeeks~~

After decades of talk, the era of artificial intelligence (AI) is finally arriving and debate about how this will affect business processes is well underway. Much of that debate has remained focussed on the IT department or at an operational level and of course, it is in these areas that many of the challenges and opportunities will be tackled. But to regard AI as rooted in departments and ...

An argument that—despite dramatic advances in the field—artificial intelligence is nowhere near developing systems that are genuinely intelligent. In this provocative book, Brian Cantwell Smith argues that artificial intelligence is nowhere near developing systems that are genuinely intelligent. Second wave AI, machine learning, even visions of third-wave AI: none will lead to human-level ...

~~The Promise of Artificial Intelligence | The MIT Press~~

Artificial Intelligence, commonly abbreviated as AI, has a popular connotation within Scratch relating to a computerized mind that consists entirely of programming code.. Its usage in Scratch, albeit somewhat misleading, is most common in projects in which a user can play a game against the computer.

~~Artificial Intelligence – Scratch Wiki~~

British mathematician and scientist Alan Turing first looked into computing intelligence in 1950. In a paper called “ Computing Machinery and Intelligence ” , he suggested using a now-famous ‘ Imitation Game ’ to test a machine ’ s sentient capabilities, which eventually laid the groundwork for the development and discovery of artificial intelligence (AI).

The Innovation Center for Artificial Intelligence (ICAI) is a national initiative focused on joint talent and technology development between academia, industry and government in the area of artificial intelligence. The Netherlands has the talent, the world-class research and the longstanding tradition in AI education to be one of the world ’ s top ranked countries in terms of innovation power ...

~~ICAI – Innovation Center for Artificial Intelligence~~

Artificial intelligence can be defined as the creation of a machine that can replace and perform tasks that normally require human intelligence and reasoning. Robots today can replace many human tasks, however, the most critical pieces that define true artificial intelligence are the main traits that create human reasoning or logic (beyond knowledge): morals and ethics. First, an artificially ...
