The 35th anniversary of this classic of art theory.

When are one hundred shoes too many shoes? When you are a centipede! And what do you do with too many shoes? Why, you give them away. Find out to whom in this delightfully silly story about a centipede with sore feet. And can you spot the beetle with seven legs? Have fun with numbers in this hilarious new picture book by master storyteller and children's book illustrator, Tony Ross.

Traces the development of mathematical thinking and describes the characteristics of the "republic of numbers" in terms of humankind's fascination with, and growing knowledge of, infinity.

This book explores education for juvenile offenders in relation to Passages Academy, which is both similar to and representative of many school programs in juvenile correctional facilities. Examining the mission and population of this school contributes to an understanding of the ways in which the teachers think about and ultimately act with respect to their detained juveniles students, and particularly illustrates how the tension between punishment and rehabilitation is played out in school policies and design. By calling attention to the decisions that surround juvenile detention education, the extant research concentrates on three main areas: first, the social, political, and pedagogical forces that determine who enters the juvenile justice systems; second, how these court-involved youths are educated while they are in the system; and third, the practical problems and the social justice issues youths

encountered when transitioning back to their community schools. "I Hope I Don't See You Tomorrow is both heartwarming and heartbreaking: its vast empathy for the students that L. A. Gabay teaches is edifying, while its unsparing examination of the forces that push youth into detention is soul shearing. Gabay is at once Tocqueville and Kozol: he brilliantly guides us through the educational territory that is foreign to most of us, even as he paints a searing portrait of teachers who shape lesson plans for students who must learn under impossible conditions. Gabay's haunting and eloquent missive from the front lines of pain and possibility couldn't be more timely as the nation's first black president seeks to lessen the stigma of nonviolent ex-offenders in our society. Gabay's book confronts the criminal justice system at its institutional roots: in the economic misery and racial strife of schooling that compounds the suffering of poor youth as they are contained by a state that often only pays attention to them when they are (in) trouble. Gabay opens eyes and vexes minds with this stirring and sober account of what it means to teach those whom society has deemed utterly expendable." - Michael Eric Dyson, author of *The Black Presidency: Barack Obama and the Politics of Race in America* As a beneficiary of Lee Gabay and his colleague's patience, discipline, and compassionate teaching at the school, this timely book beautifully decrypts the pedagogical framework within the juvenile justice system. As America comes to term with its zeal for incarceration, policymakers, educators, government officials, parents and advocates should take advantage of this carefully written book and use it as reflection and pause as we prepare our young court-involved students towards adulthood." - Jim St. Germain, Advisory counsel on President Obama's Taskforce on Police & Community Relations and Mayor Bloomberg's Close to Home initiative

Rapid Viz, Third Edition: A New Method for the Rapid Visualization of Ideas provides hands-on instruction on quick sketching skills and techniques that allow you to picture your ideas mentally, and then quickly convert those thoughts into visual reality on a piece of paper. The method is not designed to help you become a master illustrator, but rather a visual thinker and communicator. Emphasizing speed and simplicity, the Rapid Viz method breaks down drawing to the essentials, teaching the fundamental techniques of graphic art and design using only the simplest of tools: felt-tip pens or pencils and paper. Using a minimum amount of time, trouble, and effort, Rapid Viz enables you to nail down your ideas onto paper, rapidly converting your thoughts while they are still fresh, and then polish them for clear visual communication with others.

This book constitutes the refereed proceedings of the 21st International TRIZ Future Conference on Automated Invention for Smart Industries, TFC 2021, held virtually in September 2021 and sponsored by IFIP WG 5.4. The 28 full papers and 8 short papers presented were carefully reviewed and selected from

48 submissions. They are organized in the following thematic sections: inventiveness and TRIZ for sustainable development; TRIZ, intellectual property and smart technologies; TRIZ: expansion in breadth and depth; TRIZ, data processing and artificial intelligence; and TRIZ use and divulgation for engineering design and beyond. Chapter 'Domain Analysis with TRIZ to Define an Effective "Design for Excellence"' is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Imre Lakatos's *Proofs and Refutations* is an enduring classic, which has never lost its relevance. Taking the form of a dialogue between a teacher and some students, the book considers various solutions to mathematical problems and, in the process, raises important questions about the nature of mathematical discovery and methodology. Lakatos shows that mathematics grows through a process of improvement by attempts at proofs and critiques of these attempts, and his work continues to inspire mathematicians and philosophers aspiring to develop a philosophy of mathematics that accounts for both the static and the dynamic complexity of mathematical practice. With a specially commissioned Preface written by Paolo Mancosu, this book has been revived for a new generation of readers.

By shedding light on the many factors that can intervene and create inaccurate testimony, Elizabeth Loftus illustrates how memory can be radically altered by the way an eyewitness is questioned, and how new memories can be implanted and old ones changed in subtle ways.

Were it not for the calculus, mathematicians would have no way to describe the acceleration of a motorcycle or the effect of gravity on thrown balls and distant planets, or to prove that a man could cross a room and eventually touch the opposite wall. Just how calculus makes these things possible and in doing so finds a correspondence between real numbers and the real world is the subject of this dazzling book by a writer of extraordinary clarity and stylistic brio. Even as he initiates us into the mysteries of real numbers, functions, and limits, Berlinski explores the furthest implications of his subject, revealing how the calculus reconciles the precision of numbers with the fluidity of the changing universe. "An odd and tantalizing book by a writer who takes immense pleasure in this great mathematical tool, and tries to create it in others."--New York Times Book Review

This book describes a revolutionary methodology for enhancing technological innovation called TRIZ. The TRIZ methodology is increasingly being adopted by leading corporations around the world to enhance their competitive position. The authors explain how the TRIZ methodology harnesses creative principles extracted from thousands of successful patented inventions to help you find better, more innovative,
