Chinese Space Policy: A Study in Domestic and ...

The space program of the People's Republic of China is directed by the China National Space Administration (CNSA). Its technological roots can be traced back to the late 1950s, when China began a ballistic missile program in response to perceived American (and, later, Soviet) threats.However, the first Chinese crewed space program only began several decades later, when an accelerated program ...

Chinese Space Policy A Study In Domestic And International Politics Space Power And Politics

This volume explains the beginnings and expansion of China's space program, analyzing how China is now able to hold such ambitions and how the interaction between technology, politics and economics has influenced the Chinese space program. It opens by tracing out the earlier development of the space program and identifying the successes and problems that plagued this initial effort, later focusing upon its development over the past decade and into the future. As China is now able to reach into outer space with its machines and, since 2003, with its humans, the authors examine how this move from a non-participant status to a state operating at the highest level of space activities has confirmed its potential place as the new economic and military superpower of the twenty-first century. They also demonstrate how recent successes mean that China is now confronted by an issue previously encountered by other space 'powers', such as the United States and the former Soviet Union: what is the value of the space program, given its high costs and likelihood of dramatic failure? Chinese Space Policy will be of great interest to students of space studies, Chinese politics, security studies, and international relations in general.

Since China destroyed one of its own satellites in January 2007 with a kinetic kill missile, there has been concerns about how much threat the present development of the Chinese space program represents for the United States. To answer this question, this paper makes an analysis of the history and present capabilities of the People's Republic of China, compares the Chinese space program with the US, and evaluates the specific threat of the Chinese antiballistic missile systems. The Chinese space program will then be put in perspective by comparing it to NASA, and the Chinese future space plans are appraised. Finally, the declared position of China is considered and its collaboration with international partners is discussed. The author concludes that the Chinese threat has been exaggerated and recommends cooperation between the US and China.

The world's most populous nation views space as an asset, not only from a technological and commercial perspective but also from a political one. The repercussions of this ideology already extend far beyond Washington. China vs. the United States explores future Chinese aspirations in space and the implications of a looming space race. Dr. Seedhouse provides background information on the fifteen-year history of the China National Space Administration and its long list of accomplishments. Sino-U.S. technological and commercial interests in space are discussed, including their interest in encouraging a potential space race. The national security objectives of the U.S. and China are also examined.

"White Paper on China's Space Activities in 2016" by State Council Information Office of the People's Republic of China. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten?or yet undiscovered gems?of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

It is the early 1990s and Zhou Haonan, an innocent young man from a rural family in China's West Canton Province, travels to the `golden city' of Shenzhen to seek his fortune. Kind and caring but highly ambitious, he works as an international businessman, becomes a Sanda boxing champion and even sells his blood as he spends the next 20 years striving desperately to achieve his dream of a Shenzhen permanent residence permit and a home of his own. Despite a string of humiliating failures and disasters and cruel treatment by the women who enter his life, he somehow manages to get back on his feet and carry on through all the setbacks which life throws at him. The Road to Shenzhen is one of very few novels ever to be written in English by a Chinese author who has lived all his life in China.ÿ

The year 2007 will see the 50th anniversary of the Space Age, which began with the launching of Sputnik by the Soviet Union in October 1957. Since that time, the development of space technology has revolutionised many aspects of life on Earth, from satellite television to mobile phones, the internet and micro-electronics. It has also helped to bring about a revolution in the use of military force by the most powerful states. Space is crucial to the politics of the postmodern world. It has seen competition and cooperation in the past fifty years, and is in danger of becoming a battlefield in the next fifty. The International Politics of Space is the first book to bring these crucial themes together and provide a clear and vital picture of how politically important space has become, and what its exploitation might mean for all our futures. Michael Sheehan analyses the space programmes of the United States, Russia, China, India and the European Space Agency, and explains how central space has become to issues of war and peace, international law, justice and international development, and cooperation between the worlds leading states. It highlights the significance of China and India's commitment to space, and explains how the theories and concepts we use todescribe and explain space are fundamental to the possibility of avoiding conflict in space in the future. This ground-breaking book will be of great interest to students of international relations, space politics and security studies.

The complete book of Chinese characters that covers every aspect of, and therefore answers all the questions one might have for, these fascinating ancient language symbols from script evolution to colour-illustrated biographies including proper Stroke sequences and from the complete Compound anatomy to the trinity of Sounds, Semantics, and Synopses. This series of books is the ultimate guide and reference for first-time learners as well as masters of the language. It is for both the teachers and self-motivated students. This is the 1st volume of the series, covering the 1st 100 most frequently used Chinese characters as presented with their full colour illustrations and arranged in columns from right to left on the front cover. For its extensive colour illustrations throughout, this book is best read with a colour screen reader.

In National Space Law in China, Yun Zhao examines space laws, regulations and policies in China. As the first English monograph on national space legislation in China, this book shall contribute to the understanding of China's space law regime.

Analyses the Chinese space program in the context of Chinese political, economic, and cultural parameters critical to realistic and pragmatic policy analysis. Projections are offered concerning where China might be going in the future, what policy actions the US might take to avoid a confrontational stance with China, and how to encourage Beijing to build a more stable regime. Includes a glossary. Annotation copyrighted by Book News, Inc., Portland, OR

The International Space Station (ISS) is a great international, technological, and political achievement. It is the latest step in humankind's quest to explore and live in space. The research done on the ISS may advance our knowledge in various areas of science, enable us to improve life on this planet, and give us the experience and increased understanding that can eventually equip us to journey to other worlds. As a result of the Station s complexity, few understand its configuration, its design and component systems, or the complex operations required in its construction and operation. This book provides high-level insight into the ISS. The ISS is in orbit today, operating with a crew of three. Its assembly will continue through 2010. As the ISS grows, its capabilities will increase, thus requiring a larger crew. Currently, 16 countries are involved in this

venture. The sophisticated procedures required in the Station's construction and operation are presented in Amazing 3D Graphics generated by NASA 104 pages of spectacularly detailed color graphics the Space Station as you've never seen it before!
