Continental Airlines Flight Attendant Manual

Continental Airlines was a major United States airline founded in 1934 and eventually headquartered in Houston, Texas.It had ownership interests and brand partnerships with several carriers. Continental started out as one of the smaller carriers in the United States, known for its limited operations under the regulated era that provided very fine, almost fancy, service against the larger ...

Continental Airlines - Wikipedia

Continental Airlines Flight 603 was a regularly scheduled flight from Los Angeles, California, to Honolulu, Hawaii. As was typical of off-season flights to Hawaii, the majority of the passengers were part of a group of retirees headed to the tropical islands for a spring vacation; among the 186 passengers booked on the flight, the average age was 60.

This book covers a span of over fifty years in aviation. From hand started light airplanes, flying off grass strips to wide bodied jets spanning the continents, from the CAA to the FAA and from regulation to de-regulation. Told from the viewpoint of a green kid hanging around the local airport to a veteran major airline Captain

In this textbook designed for courses on aviation labor relations, the authors-experts with many years of experience in these sectors-examine and evaluate the labor process for all aspects of the aviation and aerospace industries, including aerospace manufacturing, airlines, general aviation, federal and state administrative agencies, and public airports. Divided into three parts-Public Policy and Labor Law; Principles, Practices and Procedures in Collective Bargaining and Dispute Resolution; and the Changing Labor Relations Environment-the book provides an overview of the industries and the development of US labor law and policy, then explores the statutory, regulatory, and case laws applicable to each industry segment before concluding with an examination of current and developing issues and trends. The authors present the evolution of aviation and aerospace labor laws, going as far back as the early nineteenth century to lay the historical foundation, and cover the development and main features of the principal statutes governing labor relations in the United States today, the Railway Labor Act, the National Labor Relations Act, and the Civil Service Reform Act. They also investigate the growth of the industries and their impact on labor relations, as well as the current issues and challenges facing management and labor in each segment of this dynamic, sometimes volatile, business and their implications for collective bargaining. Twenty case studies not only illuminate practical applications of such fundamental concepts as unfair labor practices and unions' duty of fair representation but also enliven the subject, preparing the reader to use the concepts in real-world decision making. A study guide with review questions, online assignments, supplemental readings, and exercises is available for students. For those teachers using the textbook in their courses, there is an instructor's manual with additional resources for developing courses in the classroom, online, or by blended learning, as well as a variety of assignments and materials to enhance and vary the mock negotiation exercise. A revision and expansion of Robert W. Kaps's Air Transport Labor Relations, this outstanding new volume provides students and teachers with valuable information and perspectives on industries that are highly dependent on technologically skilled labor. Labor Relations in the Aviation and Aerospace Industries offers a sweeping and thorough treatment of labor relations, public policy, law, and practice and is the definitive work on the labor process in the aviation and aerospace sectors.

The Aviation Contaminated Air Reference Manual is the first ever fully referenced 800+ page summary of the complete aircraft contaminated air issue in which crews and passengers have been exposed to oil and hydraulic fumes in aircraft cabins. The reference manual, which is the result of nearly ten years of research, is aimed at policy makers, doctors, scientists, air accident investigators, engineers, crews, passengers, airline and union representatives, politicians and media involved or interested in any aspect of the contaminated air debate on commercial and military aircraft.
