Rare public disagreement between the United Arab Emirates and Saudi Arabia over OPEC policy points to a growing economic rivalry between the two largest Arab economies which only looks set to ...

In *Public Policy: Politics, Analysis, and Alternatives*, students come to understand how and why policy analysis is used to assess policy alternatives. To encourage critical and creative thinking on issues ranging from the federal deficit to health care reform to climate change, authors Michael Kraft and Scott Furlong introduce and fully integrate an evaluative approach to policy. The Sixth Edition of *Public Policy* offers a fully revised, concise review of institutions, policy actors, and major theoretical models as well as a discussion of the nature of policy analysis and its practice. Both the exposition and data have been updated to reflect major policy controversies and developments through the end of 2016, including new priorities of the Donald Trump administration.

Can a state empower its citizens by classifying them? Or do reservation policies reinforce the very categories they are meant to eradicate? Indian reservation policies on government jobs, legislative seats and university admissions for disadvantaged groups, like affirmative action policies elsewhere, are based on the premise that recognizing group distinctions in society is necessary to subvert these distinctions. Yet the official identification of eligible groups has unintended side-effects on identity politics. Bridging theories which emphasize the fluidity of identities and those which highlight the utility of group-based mobilizations and policies, this book exposes didactic enforcement of categorizations, while recognizing the social and political gains facilitated by group-based strategies.

This book presents the findings and recommendations of the evaluation of the World Bank's Strategic Environmental Assessment (SEA) Pilot Program. It shows that SEA can contribute to improving development policy and sector reform by calling attention to environmental and social priorities, strengthening constituencies, enhancing policy capacities, and improving social accountability. It also provides guidance for undertaking SEA in policy and sector reform. Although it acknowledges the need for tailoring SEA to the context of specific sectors and countries, the book discusses in detail and illustrates with examples the analytical work and participatory processes required for effective SEA at the policy level. It suggests that the time is ripe for scaling up SEA in development policy and sector reform and recommends the establishment of a global alliance on environmental and climate change mainstreaming to support developing countries efforts for achieving sustainable development. The book concludes by arguing that SEA applied to sector reform and development policy is a critical step for these efforts to be successful. This title responds to demand for SEA approaches at the policy level from policymakers, development and environmental specialists of bilateral and multilateral institutions, and environmental assessment specialists. This publication is the result of joint work by the Environment Department of the World Bank, the Environmental Economics Unit at the Department of Economics of the University of Gothenburg (EEU), the Swedish EIA Centre at the Swedish University of Agricultural Sciences, and the Netherlands Commission for Environmental Assessment (NCEA.) In line with the Paris Declaration on Aid Effectiveness, the book also contributes to harmonization of SEA approaches by the donor community that is led by the SEA Task Team of the OECD Development Assistance Committee.

Chile is recognised around the world for a strong economy, openness and political stability. There have been important advances in our economic model, educational system, and environmental regulation for sustainability, but further work needs to be done to improve Chilean competitiveness and, most importantly, citizens' welfare. This book presents recent research on environmental, political and social issues in Chile. Each chapter provides diagnostic information and presents proposals and new ideas for sustainable development in Chile. This book explores the current situation of water resource management in Chile, as well as the implications of the exploitation of natural resources on the economic and social dimensions. The dynamics of urban expansion and structure in Chilean cities is also analysed. Regarding the social dimension, immigration and gender issues are included, as well as a sound diagnosis of the higher education system.

Mondiale waardeketens zijn het complexe netwerk van activiteiten tussen lokale producent en eindgebruiker. "Global value chains" schetst de invloed van deze waardeketens op lokaal, nationaal en internationaal niveau. Het boek geeft eerst een theoretisch en wetenschappelijk kader. Vervolgens krijgt de lezer een compleet beeld van de betekenis van mondiale waardeketens aan de hand van diverse casestudies, zoals de bierbrouwindustrie in Ghana, de Namibische bio-industrie, de industrie van halfgeleiders in China en Maleisië en het toerisme in Tanzania.

Why is there so little industry in Africa? Over the past forty years, industry has moved from the developed to the developing world, yet Africa's share of global manufacturing has fallen from about 3 percent in 1970 to less than 2 percent in 2014.

Industry is important to low-income countries. It is good for economic growth, job creation, and poverty reduction. Made in Africa: Learning to Compete in Industry outlines a new strategy to help African industry compete in global markets. This book draws on case studies and econometric and qualitative research from Africa and emerging Asia to understand what drives firm-level competitiveness in low-income countries. The results show that while traditional concerns such as infrastructure, skills, and the regulatory environment are important, they alone will not be sufficient for Africa to industrialize. The book also addresses how industrialization strategies will need to adapt to the region's growing resource abundance.
