initiated, which perhaps formed the basis of modern metrology. Engineering metrology deals with the applications of measurement science in manufacturing processes. It provides a means of assessing the suitability of measuring instruments, their calibration, and the quality control of manufactured components. A product that is not

ENGINEERING METROLOGY AND MEASUREMENTS

Instrumentation and control engineering is a branch of engineering that studies the measurement and control of process variables, and the design and implementation of systems that incorporate them. Process variables include pressure, temperature, humidity, flow, pH, force and speed. ICE combines two branches of engineering. Instrumentation engineering is the science of the measurement and control of process variables within a production or manufacturing area. Meanwhile, control engineering, also

The instrumentation part of a piping and instrumentation diagram will be developed by an instrumentation engineer. Instrumentation engineering is the engineering specialization focused on the principle and operation of measuring instruments that are used in design and configuration of automated systems in areas such as electrical and pneumatic domains, and the control of quantities being measured.

Instrumentation - Wikipedia

Summary. We develop measurement capabilities and protocols to validate and advance the science of Raman spectroscopy and work to establish NIST as a unique resource to the academic, industrial, and the National Metrology communities for such measurements. Working collaboratively, the ultimate goal is to develop Raman spectroscopy into a quantitative, SI-traceable technique critical for many applications including sensing, security and forensics.
