Present value factor is calculated by dividing the total investment by net cash flow during the year. Present value of investment for a future period is computed by adjusting the total investment with present value factor based on the corresponding rate of return. According to the table B.1, for 6 years at 10% per annum rate, the present value factor is 0.5645.

Financial And Managerial Accounting 7th Edition Textbook ...

Financial accounting is concerned with the financial results that a business has already achieved, so it has a historical orientation. Managerial accounting may address budgets and forecasts, and so can have a future orientation. Timing. Financial accounting requires that financial statements be issued following the end of an accounting period. Managerial accounting may issue reports much more frequently, since the information it provides is of most relevance if managers can see it right away.
