Paul Falkowski looks "under the hood" of microbes to find the engines of life, the actual working parts that do the biochemical heavy lifting for every living organism on Earth.

Life's Engines: How Microbes Made Earth Habitable Science ...

Through photosynthesis these bacteria used the sun's rays to cleave water molecules freeing the hydrogen for carbohydrate production and discarding the oxygen. Falkowski figures it took about 300 million years for the cyanobacteria to increase the oxygen in the earth's atmosphere to 1%. Today it is 21%.
