International Journal of Gynecological Pathology

The Division of Gynecologic Pathology is a separate but integral part of the Departments of Gynecology/ Obstetrics and Pathology. There are five full-time faculty members whose activities include clinical practice, teaching, and research. The clinical activities of the members of the Division consist of rendering a histologic (pathologic) diagnosis on all surgical specimens removed from the female genital tract at the Johns Hopkins Hospital and outpatient clinics.

The world congress on Gynecology and Obstetrics Pathology will be held from November 25-26, 2019 at Paris, France and will focus on the latest research in the fields of Gynecology and Obstetrics Pathology and includes oral talks, prompt keynote presentations, poster presentations and exhibitions from the participants.

Comprehensive and practice-oriented, the fully updated 3rd Edition of this easy-to-use text covers the full range of obstetric and gynecologic pathology, including information on treatment and patient management. Written largely by the pathology and clinical faculty at Harvard's Brigham and Women's Hospital, it covers the most up-to-date information available in the field, including molecular genetics and diagnostics. Drs. Christopher P. Crum and Marisa R. Nucci are joined by new editors Scott R. Granter, Brooke E. Howitt, Mana M. Parast, and Theonia K. Boyd, to provide complete, beautifully illustrated coverage of both neoplastic and non-neoplastic disorders of the female genital system, ideal for improving pathological diagnosis. Provides distinct diagnostic/differential diagnostic criteria for any potential obstetric/gynecologic specimen encountered in practice. Features more than 2,250 full-color images, key points at the end of each chapter, and an appendix with commonly used ICD-10 codes Covers topics not often found in gynecologic pathology textbooks, such as vulvodynia, and diseases of the anus. Approaches topics from a practice-oriented point of view, beginning with clinical presentation and progressing through histopathology, differential diagnosis, and treatment for each disorder. Emphasizes new practice issues and their biologic basis including approaches to vulvar, cervical and endometrial precursors as well as the underpinnings of cervical, endometrial and ovarian cancer. A comprehensive look at mesenchymal neoplasia, including not only lower genital tract and uterus but also the retroperitoneum.

Part of the growing High-Yield Pathology Series, Gynecologic and Obstetric Pathology is designed to help you review the key features of ob/gyn specimens, recognize the classic look of each disease, and quickly confirm your diagnosis. Authors Christopher Crum, MD, Michelle S. Hirsch, MD, PhD, and William Peters III, MD, incorporate a logical format, excellent color photographs, concise bulleted text, and authoritative content to help you accurately identify hundreds of discrete disease entities affecting the female reproductive tract. Consult this title on your favorite e-reader. Find information quickly and easily with a templated, easy-to-reference format. Confirm your diagnoses with more than 1,000 superb color photographs that demonstrate the classic appearance of each disease. Find the answers you need fast with concise, bulleted text covering clinical description, etiology, pathology (gross and microscopic), differential diagnosis, ancillary diagnosis techniques, and prognosis. Depend on authoritative information from leading experts in the field.

In covering the topic of gynecologic and obstetric pathology, this book attempts to carve out its own niche midway between an atlas and a traditional textbook. The gross and microscopic images in this atlas are presented exclusively in color, and are supplemented by pertinent clinical information and discussions of differential diagnostic considerations. When deemed appropriate, images of immunohistochemical and special stains are included. To further enhance their visual appeal and the overall learning experience, many images in this book are presented with annotations and/or in composite form, and selected images have been enlarged. This image-intensive textbook also includes numerous Pap smear images and cytologic-histologic correlations. In addition to coverage of pathology of the organs of the female genital tract, brief overviews of the normal histology of these sites are provided as necessary background information. Separate chapters are also devoted to placental and peritoneal pathology. There is an emphasis on diagnostic-related issues pertaining to common lesions and their variants, although classic forms of rare lesions are also presented. In selected instances, recommendations on the processing of gross pathology specimens, discussions regarding the optimal approach for intraoperative consultations, and recommendations on the phrasing of key portions of pathology reports are provided. The 10 chapters of this book are organized by site, and the beginning of each chapter lists the entities discussed and their corresponding page numbers.

This book fills the gap in understanding of pathology of the female genital tract that is often understated during training. Normal histology and pathology of abnormal conditions are covered for the lower and upper genital tract, in a concise manner with over 200 color illustrations. Topics include this covers inflammatory diseases, iatrogenic conditions, changes associated with menopause, and benign and malignant neoplasms. This text also address adjunctive testing such as molecular diagnostics and immunohistochemistry staining. The text is concise and practical with a liberal use of bullet points, and it includes clinicopathologic correlations. Breakout tables in each chapter cover information the clinician should provide the pathologist to get the most useful report, as well as pathology issues and challenges that may result in a report less specific than the clinician is expecting. Written by board certified experts, this book is the ultimate resource for gynecological pathologists, obstetrics, OB/GYN physicians, and gynecology practitioners.

Volume 2 contains 17 chapters covering disease entities of the uterine myometrium, ovary, fallopian tube, peritoneum, placenta, gestational trophoblastic diseases, and gynecology related cytology. It covers all the recognized recent advances within the field. Key diagnostic and differential diagnosis related points are illustrated in numerous tables. In addition, plenty of high quality pictures are presented for the vast majority of entities to facilitate both learning and teaching.

This atlas presents an outstanding collection of images of diseases that practitioners may encounter. Designed as a 'working atlas,' this book is organized by organs and includes separate chapters on the placenta and breast. Includes tables of tumor staging and the WHO classification of disease. Includes WHO histologic classifications and FIGO and TNM staging criteria. Text and illustrations follow classifications discussed, providing a logical sequence for the reader to comprehend the disease process.

This is an essential guide to gynaecological and obstetric histopathology for MRCOG candidates.
