Equations of Lines You can write an equation of a line if you are given any of the following:  $\square$  the slope and the y-intercept,  $\square$  the slope and the coordinates of a point on the line, or  $\square$  the coordinates of two points on the line. If  $m$  is the slope of a line,  $b$  is its y-intercept, and  $(x_1, y_1)$

The General Theory of Employment, Interest, and Money, written by legendary author John Maynard Keynes is widely considered to be one of the top 100 greatest books of all time. This masterpiece was published right after the Great Depression. It sought to bring about a revolution, commonly referred to as the 'Keynesian Revolution', in the way economists thought—especially challenging the proposition that a market economy tends naturally to restore itself to full employment on its own. Regarded widely as the cornerstone of Keynesian thought, this book challenged the established classical economics and introduced new concepts. 'The General Theory of

Employment, Interest, and Money' transformed economics and changed the face of modern macroeconomics. Keynes' argument is based on the idea that the level of employment is not determined by the price of labour, but by the spending of money. It gave way to an entirely new approach where employment, inflation and the market economy are concerned.
