The acquisition comes amid a slew of other major chip acquisitions, including Marvell Semiconductor's $10 billion purchase of Inphi, Nvidia Corp.'s $40 billion purchase of Arm Ltd. from SoftBank ...

With proven, step-by-step solutions, this unique and practical book shows information technology (IT) project managers how to acquire the right technology from the right vendor at the right price for their business. There are numerous project management books on how to build technology, but the increase in project failure, limited resources, and accelerated change in systems and platforms has forced IT managers to move from building to buying technology, thereby shifting substantial risks to third parties. Allen Eskelin, drawing on his own experience managing acquisition projects, thoroughly explains each task required to buy technology successfully from outside vendors. Technology Acquisition covers all facets of technology acquisition management, including the "people dynamics" that can make or break a project. The book offers useful templates, example documents, checklists, and schedules that guide you through the entire procedure, as well as case studies to illustrate the processes described. These processes include: Initiation--creating and chartering a project to address your business needs Planning--organizing teams; defining and prioritizing requirements; identifying vendors Research--gathering information on vendors and their technologies Evaluation--interpreting the results of research; selecting a vendor Negotiation--defining a negotiating strategy; planning the negotiation; negotiating successfully Implementation--developing, testing, and deploying vendor solutions Operations--managing an ongoing process to extend the life of the product http://www.technologyacquisition.com provides a forum for sharing experiences in project management. It also updates and supplements information on topics covered by the book.

This new book is the first full account, inside or outside government, of China's efforts to acquire foreign technology. Based on primary sources and meticulously researched, the book lays bare China's efforts to prosper technologically through others' achievements. For decades, China has operated an elaborate system to spot foreign technologies, acquire them by all conceivable means, and convert them into weapons and competitive goods—without compensating the owners. The director of the US National Security Agency recently called it "the greatest transfer of wealth in history." Written by two of America's leading government analysts and an expert on Chinese cyber networks, this book describes these transfer processes comprehensively and in detail, providing the breadth and depth missing in other works. Drawing upon previously unexploited Chinese language sources, the authors begin by placing the new research within historical context, before examining the People's Republic of China's policy support for economic espionage, clandestine technology transfers, theft through cyberspace and its impact on the future of the US. This book will be of much interest to students of Chinese politics, Asian security studies, US defence, US foreign policy and IR in general.

As advancements in technology continue to influence all facets of society, its aspects have been utilized in order to find solutions to emerging ecological issues. Creating a Sustainable Ecology Using Technology-Driven Solutions highlights matters that relate to technology driven solutions towards the combination of social ecology and sustainable development. This publication addresses the issues of development in advancing and transitioning economies through creating new ideas and solutions; making it useful for researchers, practitioners, and policy makers in the socioeconomic sectors.

The comprehensive, practical guide to buying, selling, and merging technology companies The Technology M&A Guidebook provides executives and entrepreneurs interested in acquiring or selling a technology company with everything they need to know about the entire M&A process, from identifying target companies or buyers to financial analysis, due diligence, tax issues, valuation, and legal considerations. This book explores specific issues that are unique to technology M&A: assessing the impact of technology sector high-change rates; market-driven product development; company culture issues; engineers as managers and managers as engineers; consumer and technical product differences; technology marketing issues; intellectual property considerations; Internet interaction; and more. It also provides detailed analyses of factors involved in acquiring companies from different sectors, including. * Semiconductor equipment and chip manufacturers * PC/workstation and related hardware companies * Software businesses * Data networking and telecommunications firms * Internet-related companies Don't enter the M&A process unprepared. Let The Technology M&A Guidebook help you beat the odds and make your sale or acquisition a complete success.

In Beyond Chaos, the keenest contributions to the Management Forum have been incorporated into a single volume to reveal best practices in managing software projects and organizations. The forty-five essays contained in this book are written by many of the leading names in software development, software engineering, and technical management. Each piece has been selected and edited to provide highly focused ideas and suggestions that can be translated into immediate practice. Pragmatic and provocative, they address key management concerns involving people, planning and productivity, coping under pressure, quality, development processes, and leadership and teamwork.

Do the technology acquisition decisions you make today help people and the planet tomorrow? Has the technology acquisition value of standards been quantified? What are the technology acquisition business drivers? How do you assess your technology acquisition workforce capability and capacity needs, including skills, competencies, and staffing levels? Is the technology acquisition test/monitoring cost justified? Defining, designing, creating, and implementing a process to solve a challenge or meet an objective is the most valuable role... In EVERY group, company, organization and department. Unless you are talking a one-time, single-use project, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?
