The twentieth century was the most destructive in human history, but from its vast landscapes of ruins was born a new architectural type: the cultural monument. In the wake of World War I, an international movement arose which aimed to protect architectural monuments in large numbers, and regardless of style, hoping not only to keep them safe from future conflicts, but also to make them worthy of protection from more quotidian forms of destruction. This movement was motivated by hopeful idealism as much as by a pragmatic belief in bureaucracy. An evolving group—including architects, intellectuals, art historians, archaeologists, curators, and lawyers—grew out of the new diplomacy of the League of Nations. During and after World War II, it became affiliated with the Allied Military Government, and was eventually absorbed by the UN as UNESCO. By the 1970s, this organization had begun granting World Heritage status to a global register of significant sites—from buildings to bridges, shrines to city centers, ruins to colossi. Examining key episodes in the history of this preservation effort—including projects for the Parthenon, for the Cathedral of St-Lô, the temples of Abu Simbel, and the Bamyian Buddahs —Lucia Allais demonstrates how the group deployed the notion of culture to shape architectural sites, and how architecture in turn shaped the very idea of global culture. More than the story of an emergent canon, Designs of Destruction emphasizes how the technical project of ensuring various buildings’ longevity jolted preservation into establishing a transnational set of codes, values, practices. Yet as entire nations’ monumental geographies became part of survival plans, Allais also shows, this paradoxically helped integrate technologies of destruction—from bombs to bulldozers—into cultural governance. Thus Designs of Destruction not only offers a fascinating narrative of cultural diplomacy, based on extensive archival findings; it also contributes an important new chapter in the intellectual history of modernity by showing the manifold ways architectural form is charged with concretizing abstract ideas and ideals, even in its destruction.

After its conquest by Alexander the Great in 332 bc, Egypt was ruled for the next 300 years by the Ptolemaic dynasty founded by Ptolemy I, one of Alexander's generals. With the defeat of Cleopatra VII in 30 bc, Egypt became a province of the Roman Empire, and later of the Byzantine Empire. For a millennium it was one of the wealthiest, most populous and important lands of the multicultural Mediterranean civilization under Greek and Roman rule. The thousand years from Alexander to the Arab conquest in ad 641 are rich in archaeological interest and well documented by 50,000 papyri in Greek, Egyptian, Latin, and other languages. But travelers and others interested in the remains of this period are ill-served by most guides to Egypt, which concentrate on the pharaonic buildings. This book redresses the balance, with clear and concise descriptions related to documents and historical background that enable us to appreciate the fascinating cities, temples, tombs, villages, churches, and monasteries of the Hellenistic, Roman, and Late Antique periods. Written by a dozen leading specialists and reflecting the latest discoveries and research, it provides an expert visitor's guide to the principal cities, many off the well-worn tourist paths. It also offers a vivid picture of Egyptian society at differing economic and social levels.

The new full-colour Rough Guide to Egypt is the definitive guide to this amazing country, whose ancient civilization still fascinates today. But there's more to Egypt than just pyramids and temples. The Historical Dictionary of Ancient and Medieval Nubia covers the period from the Paleolithic, all the periods of ancient Nubia (Predynastic, Kerma, Dynasty XXV, Napatan, Meroitic, Post-Meroitic) and to the end of medieval Christianity in Nubia (Sudan). This resource focuses on Nubian history through a Nubian perspective, rather than on the more common Egypto-centrism perspective, and the coverage is based on the latest and best archaeological and epigraphic evidence. Newly created maps of the general area and its specific regions and place names and a photospread showing important related features of the region are included. A detailed chronology provides a timeline of historical events, and an introductory narrative shapes the overall history and leads to the main body of the work in the form of a cross-referenced dictionary. The descriptive entries cover the main features of the region in the various periods that are key not only to Nubian events, but also to the important interactions they had with Egypt to the north. Nine appendices and an extensive bibliography conclude this work. Lobban has been teaching Nubian studies in undergraduate classrooms for thirty years, and this book is a product of his hands-on experiences as well as extensive anthropological fieldwork and travel in Sudanese and Egyptian Nubia.
