Table of Contents. Jean Piaget developed a theory of cognitive development (1935) which explains how a child constructs a mental model of the world. He disagreed with the idea that intelligence was a fixed trait, and regarded cognitive development as a process which occurs due to biological maturation and interaction with the environment. Jean Piaget ' s take on learning, viewed as a modification in the state of knowledge, coherently integrates itself in the group of piagetian research on ...

Dialectical Journal #7 - The Psychology of Intelligence by Jean Piaget Quote: “ It seems that, in the perceptual field, a distinction must be made between perception as such—the totality of relations given immediately and simultaneously with each centring—and the perceptual activity which comes into play in the very act of centring vision or of changing the centring (as well as in other acts.)

[Dialectical Journal #7 - The Psychology of Intelligence by ...](#)

Piaget (1936) was the first psychologist to make a systematic study of cognitive development. His contributions include a stage theory of child cognitive development, detailed observational studies of cognition in children, and a series of simple but ingenious tests to reveal different cognitive abilities.
